

- Compact AC outlet for installation in control cabinets.
- T-Class branch rated fuse and status indicating LED.
- 120Vac, 10A.
- Mounts on 32mm and 35mm DIN rails

The latest addition to Emphatec's line of AC outlet modules is the ACFT version with on-board branch fuse. The fuse, a T-class type, provides a 10KA interrupting current rating. An LED provides indication that the fuse is healthy and the power is applied to the module.

The VANGUARD® AC outlet modules allow quick and easy installation of maintenance outlets in control cabinets and machinery. We currently offer a duplex outlet, a single outlet with a supplemental circuit breaker and a GFCI version. Other versions are in development.
